

Nine Platform Compliance Matrix

Nectar Engine: Nine-Platform Compliance Matrix

A scannable reference for affiliate content compliance across all 9 supported platforms.
Data sourced from the live Nectar Engine compliance layer.

Summary Table

Platform	Risk Level	Primary Risk
X (Twitter)	LOW	Unmarked disclosures, spam detection
TikTok	MEDIUM	Missing branded content toggle, health claims
Instagram	MEDIUM	Missing Paid Partnership tag, health guarantees
Facebook	MEDIUM	Deceptive claims, cloaked URLs in ads
Reddit	HIGH	Self-promotion rules, affiliate link restrictions
Pinterest	LOW	Missing disclosure, misleading before/after
Snapchat	MEDIUM	Explicit content, dating-vertical restrictions
Discord	MEDIUM	Adult content in ads, unsolicited DMs
Telegram	MEDIUM	Adult content in paid ads, inconsistent enforcement

Platform-by-Platform Detail

X (Twitter) — LOW RISK

Category	Detail
Risk	LOW
Banned Triggers	Direct link shorteners in bio-only posts, multi-level marketing language, unmarked financial advice, unlabeled adult content, gambling links
Safer Approach	Disclose paid partnerships using X's Paid Partnership label and include clear identifiable disclosure in the post itself. A standalone #ad is not sufficient on its own under FTC guidance. Avoid link shorteners that obscure the destination. Keep financial and health claims factual and cite sources.
Notes	X permits properly labeled adult content; the risk is unlabeled or misleading adult material. Spam detection triggers on mass identical posting, not a specific frequency threshold.

TikTok — MEDIUM RISK

Category	Detail
Risk	MEDIUM
Banned Triggers	Branded content without the Branded Content toggle, before-and-after health claims, crypto or token promotions, adult themes, misleading weight-loss promises
Safer Approach	Enable the Branded Content toggle for posts that qualify as branded content. Avoid hardcoded weight-loss or income claims.
Notes	TikTok enforces against repetitive content that triggers spam detection. The enforcement threshold is behavioral, not a specific post-count limit.

Instagram — MEDIUM RISK

Category	Detail
Risk	MEDIUM
Banned Triggers	Affiliate links without Paid Partnership tag, health outcome guarantees, before-and-after transformations, crypto promotions, tobacco or alcohol targeting under-25
Safer Approach	Use the Paid Partnership label for all branded posts. Place disclaimers in the first line of captions rather than burying them. Avoid result-specific health language like “will cure” or “guaranteed to work.”
Notes	Instagram’s algorithm may reduce reach for accounts that post a high ratio of commercial content. Enforcement is behavioral, not a specific frequency threshold.

Facebook — MEDIUM RISK

Category	Detail
Risk	MEDIUM
Banned Triggers	Misleading health claims, fake urgency (“only 2 left”), crypto schemes, adult content, multi-level recruitment language, cloaked affiliate URLs in ads
Safer Approach	Use the Branded Content tag for all sponsored posts. In ads, use Meta’s transparency tools and avoid cloaked links. Health offers should avoid disease-specific claims.
Notes	Treat Facebook as MEDIUM-risk for affiliate content. Ad review, disclosure requirements, deceptive-claims enforcement, and restricted vertical rules can all affect delivery. Check the current Meta policy before publishing.

Reddit — HIGH RISK

Category	Detail
Risk	HIGH
Banned Triggers	Self-promotion without community approval, affiliate links in top-level posts on most subs, karma-farming patterns, duplicate posts across subreddits, undisclosed brand affiliation
Safer Approach	Lead with value and genuine discussion. Place links only in comments when allowed by subreddit rules. Always disclose affiliation if asked. Check each subreddit wiki for self-promo policies before posting.
Notes	Reddit's spam rules concern repeated, unwanted mass engagement rather than a specific numeric threshold. Each subreddit sets its own self-promotion rules. Build karma through genuine participation before any affiliate activity.

Pinterest — LOW RISK

Category	Detail
Risk	LOW
Banned Triggers	Health misinformation, misleading before-and-after pins, adult content, affiliate links in pin descriptions without disclosure, deceptive product claims
Safer Approach	Include FTC disclosure in the first line of every pin description. Use high-quality original images rather than stock. Link directly to the offer landing page rather than through redirect chains.
Notes	Pinterest may limit distribution of accounts that pin the same URL excessively. The threshold is behavioral, not a specific pin-count limit.

Snapchat — MEDIUM RISK

Category	Detail
Risk	MEDIUM
Banned Triggers	Explicit sexual content or references to sexual activity, sex work / pornography / nudity, dating services emphasizing casual sexual encounters, sponsored lenses with suggestive content, undisclosed sponsored content in Stories or Spotlight, content targeting under-18 without age-gate
Safer Approach	Age-gate all dating-vertical content 18+. Keep the dating angle emotional and lifestyle-focused (companionship, connection) rather than sexual. Use the Sponsored label on all branded Story and Spotlight content. Avoid “casual encounters” framing entirely.
Notes	More permissive than most platforms for legitimate dating offers if content stays non-explicit and age-gated. Snapchat users swipe quickly, so front-load the value.

Discord — MEDIUM RISK

Category	Detail
Risk	MEDIUM
Banned Triggers	Explicit or implicit adult sexual content in Discord Ads, compensated sexual acts or escort service references in Discord Ads, intimate massage or sex work references in Discord Ads, products shaped like intimate body parts in Discord Ads, unsolicited DMs with affiliate links, bot-driven mass messaging
Safer Approach	In private servers, dating/relationship content in non-explicit terms is generally permissible. For Discord's official Ads product, adult-adjacent content is prohibited outright. Only post affiliate content in channels designated for it.
Notes	Enforcement is structurally contained to closed communities, not broadcast/discovery risk. Discord's Ads Policy (HIGH-risk for adult content) is much stricter than organic server enforcement, where age-restricted channels and community consent allow more leeway. No public algorithmic feed to exploit.

Telegram — MEDIUM RISK

Category	Detail
Risk	MEDIUM
Banned Triggers	Adult materials on the official Telegram Ads product, illegal pornographic content on publicly viewable channels, phishing or malware links, unsolicited DM blasts to non-opted-in users, crypto scam patterns, content that could trigger app-store policy crackdowns
Safer Approach	Do not use Telegram's paid Ads product for adult-adjacent dating content. For organic channels, use opted-in audiences, clear disclosure, and factual content.
Notes	Overall affiliate-content risk: MEDIUM, but Telegram's official paid Ads product is HIGH-risk for adult content. Organic channel/group promotion sits between MEDIUM and HIGH because enforcement is inconsistent. Verify current Telegram rules before publishing.

Risk Distribution

Risk	Count	Platforms
LOW	2	X (Twitter), Pinterest
MEDIUM	6	TikTok, Instagram, Facebook, Snapchat, Discord, Telegram
HIGH	1	Reddit

Key Compliance Themes Across Platforms

1. **Disclosure is non-negotiable.** Every platform that allows affiliate content requires some form of paid partnership or sponsorship disclosure. The format varies (tags, labels, inline text) but the requirement is universal.
2. **Health claims are the fastest ban trigger.** Guarantees, before/after comparisons, and disease-specific language will get flagged across TikTok, Instagram, Facebook, and Pinterest.
3. **Adult/dating verticals need platform-specific handling.** Reddit and Discord are the strictest. Snapchat and Telegram are more permissive for non-explicit content but require age-gating. X and Pinterest are fine with proper labeling.
4. **Behavioral enforcement, not numeric limits.** No platform publishes a specific “X posts per day” limit. Enforcement is pattern-based: repetitive identical content, mass posting, and karma-farming behavior are what trigger bans.
